

Tuesday - Science.

Growing veg from scraps.

Amazingly we can all grow more vegetables from the parts of them we don't eat and generally compost or throw away!

Here is an easy picture guide to the vegetable you can grow easily. You can use your chrome books to explore scrap gardening in more detail.

Please keep a diary of what you do and log how long it takes for the vegetable to begin to shoot and grow. You should support this with photographs or sketches.

The Magical Parts

CELERY
